

The invention claimed is:

1. A laminated fabric with a structure in which a face textile is laminated on one side of a durable film with a temporary adhesive layer interposed therebetween and a back textile is laminated on the other side of the durable film with a durable adhesive layer interposed therebetween.
5
2. The laminated fabric according to claim 1, wherein the durable film is a waterproof moisture vapor permeable film.
3. The laminated fabric according to claim 2, wherein the waterproof moisture vapor permeable film is a porous polytetrafluoroethylene film.
- 10 4. The laminated fabric according to claim 3, wherein at least a portion of the inside surface pores of the porous polytetrafluoroethylene film is coated with a water and oil repellent agent.
5. The laminated fabric according to claim 3, wherein a continuous coating of a hydrophilic resin is provided on one side or both sides of the porous polytetrafluoroethylene film.
15
6. The laminated fabric according to claim 1, wherein the face textile has a weight greater than that of the back textile.
7. The laminated fabric according to claim 1, wherein the face textile is a woven fabric and the back textile is a knitted fabric.
- 20 8. The laminated fabric according to claim 1, wherein the temporary adhesive is a water-soluble adhesive.
9. A garment comprising the laminated fabric of claim 1.
10. The garment according to claim 9, wherein at least a portion of the seams of the garment have seam sealing tape thereon.
- 25 11. The garment according to claim 9, which is subjected to post-treatment for separating the face textile and the durable film, so that the face textile and the durable film are separated from each other.
12. The garment according to claim 11, wherein the temporary adhesive is a water-soluble adhesive and the post-treatment is water washing treatment.
- 30 13. The garment according to claim 9, wherein the garment is a rainwear or cold weather wear.
14. A process for preparing a garment, comprising cutting and sewing the laminated fabric according to claim 1 to prepare a garment; and then subjecting the garment to post-treatment for separating the face textile and the durable film from each other.
35

15. A process for preparing a garment, comprising cutting and sewing the laminated fabric according to claim 1, followed by seam sealing treatment of the seams with a seam sealing tape, to prepare a garment; and then
5 subjecting the garment to post-treatment for separating the face textile and the durable film from each other.
